Environment Manager

Clone your TEST or DEVELOPMENT Matrix42 Software Asset & Service Management System based on Matrix42 PRODUCTION Environment using Environment Manager.

Description

"Environment Manager" is a stand-alone app for the Matrix42 Software Asset and Service Management Suite. The app allows you to fully automatically transfer an entire production system into a test or development system. For example, you can synchronize the current status of system configurations and databases from a development system to a test system or vice versa. Extensive configuration options in the app allows to map a wide variety of customer environments and scenarios. **Features:**

- Actions - Beside the mirroring the following actions can be performed:
 - Start Services
 - Stop Services
 - Restart Services
 - Perform IIS Reset
 - Backup databases of target system
 - Backup databases of source system
- Dashboard - Overview of the current system versions
- Extended Configuration
 - Extension of the Services to be started and stopped
 - Upload of SQL scripts for additional execution
