MyWorkspace Enterprise

Matrix42 MyWorkspace sets a new and unique standard in delivering intuitive, secure and easy-to-manage user workspaces cost-effectively, and on any device

Description

Matrix42 MyWorkspace sets a new and unique standard in delivering intuitive, secure and easy-to-manage user workspaces cost-effectively, and on any device. It's a unified workspace portal that makes it easy to integrate Software-as-a-Service (SaaS) and web applications into your organization's existing IT infrastructure (e.g. Active Directory-based). It's also the only solution on the market that enables the management of access to applications, corporate documents, devices and user IDs from a single, secure web-based environment. All the features of the Gold Edition, plus a range of advanced functionality including usage and cost reporting, and integration with Microsoft Azure and Office 365. **Cloud Connector for Active Directory** The cloud connector allows seamless integration into existing Active Directory infrastructure without requiring complex and expensive additional infrastructure components. No changes to existing firewall or security setups are required. **Federated Integration within Existing Infrastructure** Allows the integration of existing Active Directory infrastructure based on the federated architecture approach Microsoft has implemented with its Active Directory Federation Services.

Cost control for SaaS & Web Applications

MyWorkspace enables usage reporting for integrated SaaS or web applications, increasing cost transparency and making it easy to identify optimization potential.

Reporting & Dashboards

The reporting and analytics dashboard helps IT maintain control over your MyWorkspace environment by making it easy to capture, measure and visualize performance against all your most important SaaS and cloud KPIs e.g. login storms, top 10 used apps, application usage, inactive accounts, etc.

Authorization for SaaS & Web applications

Enables management (create, update & delete) of user accounts for all registered SaaS & Web applications.

Support for Azure Active Directory & Office 365

Microsoft Office 365 is a leading cloud-based line of business application that has already been adopted by many organizations. Azure Active Directory helps the IT department manage the on-premise to cloud transformation, and MyWorkspace enables a seamless integration with multiple identity providers e.g. local Active Directory, Google Directory, etc.

Adaptive Access to the Workspace

Adaptive access control provides many different pieces of contextual information that verify if the end user should have access to the application, and which kind of client can be used.

Data & Event Aggregation

MyWorkspace seamlessly integrates each customer's corporate data and end user identities into the workspace environment. This ensures each user has access to the right data and applications at all times.

Workspace Management License Compliance Integration

License Compliance integration allows Matrix42 Workspace Management customers to build a broader foundation around license compliance rules, so that SaaS and web applications are included, in addition to traditional client-based applications or service-based licenses.

Custom Branding

Matrix42 integrates your corporate identity seamlessly into the MyWorkspace environment without any major reprogramming.
