Matrix42 Endpoint Security Encryption SaaS - per User

Matrix42 Endpoint Security Encryption SaaS is all about Data Loss Prevention with comprehensive 360° encryption. * Minimum order quantity for Matrix42 SaaS solutions is 100 licenses.

Description

Matrix42 Endpoint Security Encryption SaaS Components

- Removable Device Encryption
- Local Folder Encryption
- Cloud Encryption
- Network Share Encryption
- Permanent Encryption

Matrix42 Endpoint Security Encryption SaaS is all about Data Loss Prevention with comprehensive 360° encryption. Files are being encrypted with configurable algorithms like AES 256 Bit or Blowfish 448 Bit whenever you copy a file from your local endpoint to an unsecure location and decrypted 'automagically' without the customer having to do anything if the agent is installed on the device. If customers want to access the encrypted data from an unmanaged device, it can be decrypted by entering a password via a little app that is copied with the encrypted files automatically. This behaviour can be configured very granular to ensure that certain files can't be encrypted for example on unmanaged endpoints at all. For best results, the included Insight Light technology helps collecting all data security relevant parameters of your network prior your rollout. This hosting option includes the provision of Matrix42 solutions in an ISO/IEC 27001 certified Microsoft Azure Datacenter in the Netherlands, which additionally complies with the requirements of ISO/IEC 27017 and ISO/IEC 27018. Your important workloads are managed in a secured and isolated cloud. Hosting regions in Europe also meet EU compliance requirements. This offer is valid for organizations in the EU and EFTA only.
