Feed Generator

Feed Generator

is an extension for the Matrix42 Workspace Management System. **Generate feeds** in Atom and iCalendar formats from different data sources from the workspace management and display the information in your calendar.

Description

Feed Generator is an extension for the Matrix42 Workspace Management System. Generate feeds in Atom and iCalendar formats from different data sources from the workspace management and display the information in your calendar.

With these feeds it is easy to display information from the Matrix42 system in a user-friendly way outside the Matrix42 environment.

It is therefore no longer necessary for the user to obtain appointment information manually. They can be seen directly in a calendar.

In combination with other Labtagon solutions (SBE & contract management) it is e.g. possible to display future expiring services and contracts in the calendar.

Features

- Configuration of the desired feeds according to individual requirements
- Flexible in use, as all data sources can be addressed and optionally in combination with

other Labtagon solutions extended displays are possible

Your advantages

- Fast availability of important information
- Clearly compile and display desired information from various data sources out of the WSM without time expenditure

Use cases

- automated appointments, e.g. for onboarding a new employee on the first working day
- Notify Service Desk employees of new tasks in the Atom Feed and show related appointments directly in their calendars
- communicate future maintenance dates and the resulting unavailability of services to all users in a simple and clear way
